7. Access backend
 - a. Open browser and navigate to **http://your-domain.com/admin**
 - i. User: **admin**, Password: **havefun@dm1n**
 - **Make sure to change the admin password!!**

Usage

The template has been designed to enable maximal flexibility maintaining a uniform and consistent design across all pages. In order to achieve such a consistency, every page is built of predefined building blocks called sections. Each section has a common layout with variable, section-specific settings ensuring a uniform layout of the whole website. After creating a new page, one can add limitless numbers of sections that will be sequentially included in the given order loading the page. The order of sections can be changed by drag and drop.

To get further information and impressions how to use the pages and sections, check <http://templates.didhavn-loremipsum-blog-sidebar.demo.pwtemplates.de/admin>
